

RETEC-AUTOMARK

MARKING + FASTENING SYSTEMS

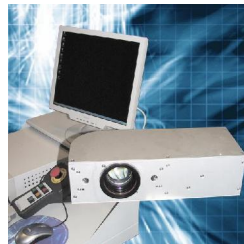

RETEC-AUTOMARK – your partner for engraving, marking and fastening systems solutions

An indelible and readable marking of dataplates and products is a necessity for every producing company. Whether embossed, debossed or laser processed, whether on metal, wood, glass, paper or plastic, the product range of RETEC-AUTOMARK contains over 30 semi- or fully-automatic models which mark your dataplates or products with consecutive numbers, variable data, logos barcodes and data-matrix-fields. Our high class product line can be adapted to your special needs of industrial marking up to connecting your marking system to networks.

The dotmarker **TECHNOMARK Model Multi 4** can be used for the marking of most different workpieces. The marking head, depending on demands, can be used in 4 different ways: mobile, stationary, as combo machine or integrated into production lines. The software is integrated and does not need a PC. As option it can be battery driven.

In comparison to the nowadays **laser marking** is the marking requirements. The to YAG-Laser. Micro-engravings this laser type. All laser combination with feeding and will be adapted to your special

conventional marking methods, most effective solution for many model range expands from CO₂- and –cuts can also be made with systems can be delivered in discharge systems. The software needs.

With the **AUTOMARK-Program** embossed marking of data plates or metal strips from the coil can be realized – including embossing, cutting-off and punching holes.

The **AMTAK-Fastening System** has solutions to fasten data plates, cable mounts or other small parts onto your products – **without pre-drilling or surface preparation**. The newly developed Tack-Mounts are special cable-mounts already assembled with metal-tacks and can therefore be fastened onto metal in one step.
